

Psychology Lecture: Introduction to Cognitive Biases

Key Points

- Cognitive biases are systematic errors in thinking that affect decisions.
- Confirmation bias leads people to favor information that confirms existing beliefs.
- The availability heuristic causes people to overestimate the likelihood of vivid events.
- Anchoring bias means first impressions disproportionately influence final judgements.

Summary

- This lecture introduced the concept of cognitive biases and their impact on human decision-making.
- Three major biases were discussed: confirmation bias, availability heuristic, and anchoring.
